

Geogrids for Local Repairs

American Road Patch

Peel & Seal Pavement Patch for local repairs

Product Overview

American Road Patch™ is a "peel and seal" patch for local repairs applied to the road surface, creating a waterproof layer extending the life of the repair. Unlike traditional methods, the American Road Patch™ is a cost-effective product that acts as a seal, reinforcement and patch for repaired potholes, cracks and working joints.

Current methods of local road repairs do not solve the cause of the problem – preventing water penetration. They only use repair mixtures with a short service life. The American Road Patch™ is the solution! Take a step forward now and avoid repetitive repairs.

Product benefits include:

- easy to use without special machines and equipment needed
- contains a high-strength fibreglass reinforcement grid
- application on asphalt or concrete
- patented technology
- resistance to damage by ploughs
- carry out repairs without closing the road
